Communication For Survival: The Ultimate Step-By-Step Beginner's Guide On How To Stay In-Touch With Your Loved Ones And The Outside World During Disaster

Synopsis

Have you ever wondered how exactly you will communicate with your family, the outside world, or help if the communication grid were to go down? What if you found yourself in the middle of a large scale and long term catastrophe where you knew the government would not be coming to your rescue? In this scenario, how would you get-in touch with your relatives? What if the entire power grid went down, for that matter? When preparing for catastrophe, there are several priorities that you must have: food, water, first aid, shelter, and security certainly come to mind. But communication must be one of those top priorities. If you don't incorporate communication into your crisis preparation today, then you are simply not going to know what to do or how to get in touch with anybody when things go bad. For example, what will you do if the phone in your pocket quits working? This is why you must think about communication and alternative communicating methods you can use in a disaster scenario. In this book, we are going to outline and discuss how you can prepare to communicate properly in a grid down disaster situation. The specific steps that we are going to talk about are:

- Step #1: Why You Can't Rely On Your Phone
- Step #2: List Of Ways To Communicate During An SHTF Scenario
- Step #3: The Top Threats To Communication Infrastructure In The United States
- Step #4: The Best Survival Radios To Own
- Step #5: Developing An Emergency Family Communications Plan

By the end of this book, you will have gained a wealth of knowledge on the best ways to communicate during disaster, while the communication infrastructure in the U.S is so fragile, and how to get in-touch with your family and relatives when catastrophe finally does strike.
