Make Your Own Dinosaur Out Of Chicken Bones: Foolproof Instructions For Budding Paleontologists

Synopsis

Most people would laugh if you told them you were having a dinosaur for dinner. But you can. Because birds evolved from dinosaurs, says renowned paleontologist Chris McGowan, that chicken from Sunday's supper is a direct descendant of those fearsome and perennially popular "terrible lizards." To show this relationship and give readers a unique, hands-on introduction to the principles of paleontology, McGowan has devised a deliciously clever science project that kids of all ages can really sink their teeth into -- the creation of their very own dinosaur skeleton. Numerous illustrations guide readers step-by-step through the process of taking the bones of three chickens, some wire, glue, toothpicks and a few other household items, and building a model even the Museum of Natural History would admire. As they assemble their Apatosaurus skeleton, budding scientists will learn real-life paleontological practices as well as facts about evolution, anatomy, and, of course, dinosaurs. Featuring three recipes for chicken soups and salads to ensure that the chicken meat is put to good use, *Make Your Own Dinosaur out of Chicken Bones* is the perfect treat for dinosaur lovers of all ages.

Book Information

Paperback: 154 pages

Publisher: Harper Perennial; 1st edition (May 1, 1997)

Language: English

ISBN-10: 0060952261

ISBN-13: 978-0060952266

Product Dimensions: 7.4 x 0.4 x 9.2 inches

Shipping Weight: 9.6 ounces

Average Customer Review: 4.7 out of 5 stars 9 customer reviews

Best Sellers Rank: #461,675 in Books (See Top 100 in Books) #194 in [Books > Crafts, Hobbies & Home > Crafts & Hobbies > Toys & Models > Models](#) #290 in [Books > Children's Books > Science, Nature & How It Works > Experiments & Projects](#) #640 in [Books > Children's Books > Animals > Dinosaurs](#)

Age Range: 9 and up

Grade Level: 4 and up

Customer Reviews

What a terrific concept! Chris McGowan, a curator at the Royal Ontario Museum, has come up with the ideal hands-on science project. All you need is this book, three young chickens, a few

household items, and some time to make your own scale model of an apatosaurus skeleton. And it neatly dovetails with current scientific theories that birds are the living descendents of dinosaurs. McGowan's detailed, practical directions even include recipes for the leftovers. No one who has ever been interested in dinosaurs will be able to resist this book.

Christopher McGowan is an esteemed zoologist and paleontologist. He is the author of seven books, including *Discovering Dinosaurs* and *Diatoms to Dinosaurs*. He lives in Aurora, Ontario, Canada..

This book is a bit of a read for younger children but a great togetherness project book. This is definitely something to plan ahead for. If you have younger kids that love dinosaurs, they will love this book. It may stretch their patience but how many kids can say they have their own dinosaur skeleton. Teens will be able to put their dinosaur together by themselves. The dinosaur you build in this book is an Apatosaurus. There are recipes in the back of the book that you can use to eat up all of your chickens that you need. It takes about four young chickens to make this dinosaur. Like I said, this is a plan ahead project and takes time to complete. If you are the creative sort, you could build other dinosaurs.

Super cool ideas. A friend of mine did this. It is not a simple project and some bones need to be cut.

Book is okay, does not focus enough on various method to clean the bone for assembly.

Actually it is my son in law who loves it. He shared it with people at the museum he works for and they are all planning chicken for dinner soon.

14 year old grandson loved it, but may need some help creating the necessary clean, dry chicken bones. Cute idea and we will try it soon

We haven't built the model yet, but my 13 yr old is crazy for this book. Very interesting reading.

It is more difficult than I expected and quite time consuming. Worthwhile if you are interested in such a detailed project.

A wonderful project, and a clear and well-written book. Do not expect to finish quickly -- we spent many hours over many months cleaning, sorting, cutting, and assembling a beautiful 'apatosaurus.' Kids of all ages (mine are 3 and 5) can get involved, from enthusiastically finishing their chicken dinners to cleaning and sorting and assembling the new family pet. I should note that if you have a Dremel or similar moto-tool, you'll find a lot of the cutting and sanding easier (and you'll have less bone-boiling).
