Customer Reviews

Information is clear and to the point and applies to my climate zone. I live in Toronto, Canada. Doug Green's info is up-to-date re: currently available plant materials and methods and his advice is based on his own experience. I subscribe to his website where I can get this info but like the book format for easy reference.

It is quite good information that I am truly trying to learn. I am interested in this idea because I have little boys & not a lot of time for tilling. I want us all to be able to eat fresh veggies & can them for later. Plus, we are trying to prepare for possible (probable) rise in grocery prices with the rising gas prices.

Perhaps I expected more and was disappointed when I found it was not complete enough. This is only my opinion and the simple graphs on the last pages could be helpful.

but considering it is written for e-reader is very hard to navigate, having to go through A-Z every time you want to consult for particular plant.

nice guide to have lots of ideas

so many good advises, so simple to follow instructions, plain English and to the point in every way. Have to say, looking forward to read another one from this author.

I was surprised to find how little I understood with the companion planting system.

I think it could have had more info on companion planting. He left out many veggies and was not complete on each veggie. You can get as much info on youtube
